To Whom It May Concern

Re: KeelowCraft Boats

Avon Engineering built our commercial jet boats for operations here in Fiji and we have been more than satisfied with the boat's manufacture, the attention to detail displayed by the team and the ongoing support they offered to my company.

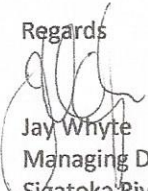

The initial survey which took place here in Fiji obviously made a huge difference to their understanding of the conditions in which the boat would be operating and this showed me that every element of the boat's construction is thoroughly studied and well planned.

The first boat was built professionally and in an expedient manner, in that I placed the order and they had the boat to us here in Fiji within 5 months, even taking into consideration the fact that the build time went over the Christmas and New Year break. This again demonstrated their commitment to providing a quality service and customer satisfaction.

I was also fortunate enough to visit the workshop in Gore and saw the meticulous way in which they craft their commercial boats, as at the same time they were building a very large commercial boat for operations in Canada which to me illustrated how highly sort after their jet boat building skills are, which was very reassuring.

We are now up to boat number four in operations here in the tropical conditions of Fiji, and we continue work closely with Dwayne and his team at Avon Engineering and I unequivocally recommend him and his company as superior boat manufacturers and we will continue to use their services now and well into the future.
